: Sithembiso_mncwabe@yahoo.com

DRIVER'S LICENCE : Code 8

STATE OF HEALTH : Excellent

SCHOOL: SUKUMA COMPREHENSIVE SCHOOL
PASSED MATRIC IN 1994

TERTIARY QUALIFICATION

TECHNIKON NATAL: CIVIL ENGINEERING DIPLOMA COMPLETED IN 12 DECEMBER 2001

DURBAN UNIVERSITY OF TECHNOLOGY: CIVIL ENGINEERING B TECH DEGREE COMPLETED IN 7 DECEMBER 2007

EXECUTIVE EDUCATION: PROJECT MANAGEMENT DIPLOMA COMPLETED IN 2002

SKILLS:

Project Management; Map server; GPS; ARC VIEW; ARC EXPLORER; ARC GIS; MS ACCESS; MS EXCELL; MS WORD; MS POWER POINT
CORELL QUATRO PRO 8; CORELL WORD PERFECT 8 AND COREL PRESATATION 8; CAD; ALLY CAD AND CIVIL DESIGN;
INITIATING DISCIPLINE; CHAIRING DISCIPLINE HEARING and INTERVIEW SKILLS. Passed Research Methodology IV as part of WATER CONSERVATION AND DEMAND MANAGEMENT Research at DUT. Writing Technical Reports; Bid Specification Reports; Bid Evaluation Reports and Chairing Health and Safety Committee meetings. Strong project financial costing skills, excellent communication and report writing abilities, and the tenacity to lead multi-disciplinary projects and teams. Strong analytical, problem-solving, and communication skills; proficiency with data analysis tools and leak detection technologies. Proficiency in using data analysis tools and leak detection technologies. Applicable management systems: control; long range planning; strategic planning and new weak signal systems. Water management: pressure management; active leakage control; water reticulation pipe; water treatment plants and wastewater treatment plants and asset management; speedy and quality of repairs. Infrastructure management: developing asset management plans and implementing pressure management to improve water network efficiency. Sustainable Resource Use: Ensuring water resources are managed sustainably for current and future generations, aligning with broader municipal goals.

KNOWLEDGE:

CURRENT EXPERIENCE

Position: Director
Duration: 1 January 2025 to date
Company: Mthobothi (Pty) Ltd

Profile:

responsible for overseeing and implementing strategies to reduce water loss (non-revenue water) within a utility's distribution system. The role involves a combination of technical, managerial, and analytical skills to ensure the efficient and sustainable use of water resources.

Key Responsibilities

The primary goal is to minimize the difference between the amount of water produced and the amount billed to customers. Responsibilities include:

- **Strategy Development:** Developing, implementing, and maintaining Standard Operating Procedures (SOPs) and comprehensive water loss reduction strategies.
- **Leak Detection and Management:** Overseeing pressure management activities, utilizing advanced leak detection technologies (such as acoustic sensors and data loggers), and managing the repair of identified leaks.
- **Infrastructure Management:** Assessing the condition of hydrants, pipes, and other water infrastructure, and advising on future upgrades or replacements (CAPEX planning).
- **Data Analysis and Monitoring:** Implementing innovative monitoring systems, analyzing data from District Metered Areas (DMAs), performing water audits, and using software like the [AWWA's Free Water Audit Software](#) to quantify losses.
- **Financial and Resource Management:** Managing budgets, resources, and contracts with external consultants and contractors, and ensuring cost recovery for services.
- **Compliance and Safety:** Monitoring and enforcing safety requirements (e.g.,

- OHASA) and ensuring compliance with all applicable laws and regulations.
- **Stakeholder Engagement:** Liaising with internal departments, external auditors, suppliers, and the community regarding water conservation programs.

Duties:

- Tendering for construction projects and supply and delivery.
- Directing and controlling the organization
- Financial Management
- Project Identification and Prioritization
- Contract Administration
- Programme / Project Management

Studying master's in civil engineering degree: M Eng (Topic: Integrated Resource Planning to mitigate water losses in Msunduzi Municipality); written and submitted research proposal and written and submitted literature review paper.

Position: Construction Manager

Duration: 1 June 2024 to 31 December 2024

Company: Holobye Trading

Duties: Construction management of laying outfall and network sewer lines and construction of road layers and road marking of national roads for SANRAL.

1. Paint application rate testing procedures and sample / administration record keeping.
2. Beads rate mixtures and application testing together with the administrative record keeping thereof.
3. Paint applications – too much pressure resulting in over spraying / “cloudiness” alongside the lines (both sides) and it might also be because of applying the paint during windy days (normally on one side).
4. Defect corrections – Sand blasting and Water jetting.
5. Execution on road marking on site
6. Manages daily construction activities, subcontractors, and site safety.
7. Ensures work is done according to specifications, quality and schedule
8. Reports directly on progress and challenges from the field.

Major Task Headings:

- Safety Management

- Construction Management
- Schedule Management
- Quality Management
- Site Management

Key Tasks and Responsibilities:

Safety Management

- Manage, co-ordinate and enforce legal requirements while holding regular safety meetings.· To enforce a stop and fix culture on sites related to all non-standard operations or unsafe work conditions.· Act as an Ambassador of the Company in all aspects of SHEQ & IR.· Respond to recommendations on SHEQ performance within assigned responsibilities and provide mentoring and support to achieve the objectives and targets.· Liaise with the Safety Manager/Officer, SHEQ on all aspects of Safety, Health, Environment and Quality matters.

Construction Management

- Liaise and co-ordinate between the site contractor's management teams, the SANRAL engineers and the clients' representative across all disciplines.· Direct, guide and coordinate site personnel, to achieve effective construction execution.· Develop and implement Construction Execution strategies at the commencement and during the execution phase of the project.· Provide Construction planning input during the project execution phase.· Report to the Project Manager of any issues arising from co-operation with other areas of Company Operations.· Maintain the Company's image to clients, public and other third parties by effective liaison and establishment of harmonious relationships.· Prepare appropriate reports and disseminate the report / matters arising throughout Construction Operations as necessary.

Schedule Management

- Manage the contractor's schedules against contractual programs, utilizing Site Supervisors to do daily monitoring.· Evaluate regularly the performance of Construction relative to project schedules, budgets and other agreed objectives.· Initiate whatever actions / improvements are necessary.· Carry out regular reviews of Construction workload, manpower utilization and staffing requirements, to ensure both the adequacy and efficiency of all assigned staff.

Quality Management

- Manage all site based QCP's through the discipline supervisors utilizing SANRAL standard documents. · Set up and implement reviews and audits to

provide assurance that all supervised activities are being undertaken in accordance with the appropriate procedures and work practices, and that procedures and work practices are sufficient.

Site Administration

- Approval of time off and leave. · Set targets, objectives and clear responsibilities for all site personnel. · Motivate site personnel by agreeing to action plans and obtaining personal commitment from them. · Develop and identify requirements for recruitment, induction, training and development of personnel, so that the company procedures, work practices and general operating systems are adequately communicated and understood. · Identify new talent and provide mentoring and career development of Construction personnel.
- Project Planning and Execution.
- Resource Allocation.
- Budget, Cost Control and Financial Management.
- Technical Oversight.
- Stakeholder & Client Management.
- Team Leadership and Coordination.
- Health, Safety, and Environmental Compliance.
- Quality Assurance.

Legal:

- Implement the requirements of the company's Construction Manual into Construction Operation duties.
- Comply with Company and Client secrecy agreements pertinent to Construction Operations.
- Basic knowledge in construction contracts administration on site such as NEC, FIDIC, GCC, JBCC.

Ensure that the provisions of the Occupation Health Safety Act 85 of 1983 and its regulations are fully always complied with at (especially the construction regulations)

To stop the process or activity which is, considered hazardous to the employees, customer and / or public. Implement immediate corrective action to carry on with the activity in a safe and hazard free manner.

- *Endorse Safety representative reports and minutes and report and investigate any incident as contemplated in Section 24 of the Act;*
- *To ensure the notification for the specific contract is in place as per the Construction Regulation (4) (1) (b).*
- *To implement and maintain Contractor's Health & Safety Plan, including periodic Audits.*
- *That all persons are aware and understand the hazards attached to the work being carried out;*
- *That the required risk assessments are carried out as in Construction Regulation*
- *That precautionary measures are identified and implemented;*
- *That any other interests in terms of health and safety are met in particular the implementation, amendment and maintenance of the prepared fall protection plan as set out in Construction Regulation 10(1)(b) and (c)*
- *To ensure that registration and good standing with the compensation fund or compensation insurer is in place before construction work commences.*
- *To supply a documented Safety Plan which includes the Health & Safety specifications of the contract and have a copy on file available on request to an employee, inspector, contractor, client, client's agent or principal contractor.*
- *To hand over a consolidated health & safety file to the client or contractor on completion of the construction work.*
- *To inspect all employees' personal protective equipment on a regular basis and to ensure that the correct maintenance and application is done on all such equipment.*

Personal Attributes:

- Strong mentorship and coaching skills
- Excellent communication and collaboration skills.
- Familiarity with industry regulations and standards.
- Results-oriented mindset with a focus on continuous improvement.
- Ability to work collaboratively in a team and independently.

CURRENT EXPERIENCE

Position: Senior Technologist
Duration: 1 November 2012 to 30 May 2024
Company: Msunduzi LM

Project Management

Reduction and Monitoring of storm water infiltration into Sanitation Systems within the Msunduzi Area of Jurisdiction project:

Project Manager: **SUPPLY AND SERVICES CONTRACT OF HIRE OF HIGH PRESSURE JETTING MACHINE; VACTOR MACHINE OR SIMILAR MACHINE; BUCKET AND WINCH MACHINE; ROOT CUTTER AND CCTV CAMERA FOR SURVEYING SEWER PIPES to clear sewer blockages**

Duration: 1 August 2015 to 30 MAY 2024
Company: Msunduzi Municipality
Job Description: Clearing sewer blockages

Job Description:

Key Performance Areas

- Management of operation, maintenance and construction functions of sewer reticulation
- Management of staff and wastewater pollution control
- Develop and implement maintenance programmes for sanitation infrastructure facilities
- Improving and upgrading of Sanitation infrastructure facilities
- Oversee the implementation of projects and contracts management
- Implementation of quality control procedures and systems to improve efficiency
- Compliance with the relevant and appropriate technical engineering, construction and other work standards, Bylaws, Water Services Act and OSH Act.

Attend War Rooms meeting; Catchment Management Forums; UMgungundlovu Catchment Technical Committee meeting.

Manages the key performance and result indicators associated with the preparation, management and maintenance and cost effective service with regards to Operations and Maintenance pump station and sewer reticulation pipes and waste water treatment plants functions of the Municipality's Waste Water Services Capital Budget and associated with the implementation of the entire Capital Works Programme (extension, augmentation, refurbishment and/or replacement of Bulk Waste Water

Infrastructure), Operations and Maintenance Programme (waste water treatment plants; waste water reticulation and outfall infrastructure), including establishing resource requirements, coordinating, monitoring and reporting on outcomes through the implementation and developing of laid down policies and procedures and providing administrative support to the Sub-Section in compliance with the Municipal Structures Act and Water Services Act to accomplish immediate, short and longer term service delivery objectives.

My Key Responsibilities:

- Financial Management
- Project Identification and Prioritization
- Contract Administration
- Programme / Project Management
- Monitoring and Evaluation
- Compliance
- Stakeholder Engagement
- Capacity Building
- Managing one hundred sanitation (sewer reticulation) staff/employees namely Superintendent; foremen; handy man and general workers.
- Refurbishment / rehabilitating sewer pipeline; outfall and waste water treatment plants.

POSITION: ACTING AS DIRECTOR ENGINEERING SERVICES FOR TWO YEARS
DEPUTY DIRECTOR: ENGINEERING SERVICES
EMPLOYER: AMAJUBA DISTRICT MUNICIPALITY
DURATION: 1 DECEMBER 2009 TO 30 OCTOBER 2012

Job description

Profile:

Analyse data (water balance, performance indicators), Identify issues (leaks, theft, aging pipes), Plan solutions (DMAs, tech, infrastructure upgrades, conservation), Implement actions (leak detection, staff training, capital projects), and Monitor results (monthly/rolling balances), focusing on long-term sustainability through data-driven decisions and proactive management. Key tools include GIS, active leak detection, and water balance analysis, all aimed at reducing real (physical) and apparent (billing/theft) losses for better resource management and cost savings.

Key Strategic Pillars

- 1. Data-Driven Diagnosis:**
 - **Water Balance:** Calculate monthly and rolling 12-month balances to spot discrepancies.
 - **Performance Indicators:** Track key metrics to benchmark and assess progress.
 - **Network Analysis:** Use Geographic Information Systems (GIS) for efficient mapping and analysis.
- 2. Proactive Leak Detection & Control:**
 - **Active Leak Detection:** Implement regular surveys to find hidden leaks.
 - **District Metered Areas (DMAs):** Divide the network to isolate and manage pressure/flow.
 - **Infrastructure Renewal:** Plan for replacing old mains and components to prevent future losses.
- 3. Demand & Apparent Loss Management:**
 - **Meter Management:** Ensure accurate metering and address faulty meters.
 - **Illegal Use Detection:** Implement routine checks for theft and unauthorized connections.
 - **Demand Management:** Promote water conservation and efficient use.

Strategic Planning Steps

- 1. Problem Identification & Goal Setting:** Define objectives (e.g., reduce loss to 15%) and identify core problems.
- 2. Data Collection & Baseline:** Gather detailed data on system inputs, outputs, and losses.
- 3. Strategy Formulation:** Develop action plans for leakage, infrastructure, and demand management.
- 4. Implementation:** Deploy technology (sensors, GIS), train staff, and execute capital projects.
- 5. Monitoring & Evaluation:** Continuously review results, adjust strategies, and update plans.

Implementing Amajuba District Municipality water conservation and water demand management.

Institutional support to the water services authority, establishment of monitoring and evaluation for WC/WDM, capacity building and awareness education: tariff structures and cost recovery

Amajuba District Municipality's Engineering Services Deputy Director manages water distribution, infrastructure maintenance, and conservation initiatives to reduce Non-Revenue Water to 15% by 2012. Key strategies include the 'War on leaks' programme, pressure management, and infrastructure upgrades.

Key elements of Engineering services water management strategy:

1 Infrastructure & Technical Services: Focuses on master planning, replacing aging infrastructure, installing bulk meters, and utilising telemetry for monitoring.

2 Water conservation (WCWDM): A 5-year, R50 million programme aimed to reduce technical losses through leak repairs, retrofitting, and zone sectorisation.

3 Revenue Management: Implements consumer database audits and potential water restriction caps for indigent households.

4 Operational Control: Manages, audits and replaces valves while improving overall asset

- Institutionalising water conservation and water demand management through policies that affect water use efficiency such as tariff, by-laws.
- Building internal controls to monitor the performance of the water services provider in terms of water use efficiency, debt control, and free basic services and cost recovery.
- Build capacity within the WSA, which is new, and strengthen the role of the WSA in terms of performance management of the WSP.
- Develop tariffs that represent the full cost of the services and implement tariffs that are "pro-poor" and stepped tariffs to reduce water use amongst high-end consumers.
- Develop and implement a water education and awareness programme amongst the communities, schools, industries and general public.
- Assessment of Water Resources versus Water Demand based on a desktop study to determine available water resources and projected water demands for the short-medium and long-term.
- Provision of sustainable services and internal capacity building through direct project of specific outcomes and outputs.
- Build capacity within the Water Services Authorities and Municipality by transferring skills and knowledge to the Water Services Authorities and internal departments that support the Water Services Authorities and internal

departments that support the Water Services Authorities and the Water Services Provider.

- Establish systems and procedures that will ensure continuity of the water conservation and water demand strategy.

Formulating water conservation and water demand management strategies, implementing them, and evaluating their impact based on Amajuba District Municipality objectives.

Water losses management project: Technical Activities conducted at Emafusini area under Dannhauser Municipality falling under Amajuba District Municipality

- Logging of flows and pressures
- Undertake a Water balance
- Determine critical points for installation of bulk water meters
- Investigate infrastructure availability/condition
- Identify priority interventions to reduce water losses including non-revenue water
- Identify interventions to maintain implemented interventions as an ongoing process.
- Installation of domestic flow meters and undertake private leak repairs.

KEY RESPONSIBILITIES:

- Head, manage and assume responsibilities of the following sections: Water and sanitation services, Project Management Unit and implementing Revenue Enhancement Strategy; formulating master plan and water services development plan.
- Performing water services authority functions

Infrastructure asset management

- Develop and implement long term asset management plans and strategies, including defining asset data standards and hierarchies.
- Oversee the entire lifecycle of an asset from planning and acquisition to maintenance, renewal and decommissioning.
- Develop and implement programs to mitigate risks, reduce asset failure, optimize spending capital investments

Core Responsibilities & Tasks

- **Strategic Planning:** Developing long-term, sustainable, and compliant asset management plans.
- **Lifecycle Management:** Overseeing assets from acquisition and design through operation and disposal.
- **Performance & Risk Assessment:** Utilizing data analytics to monitor performance and identify potential failures.

- **Financial Management:** Managing budgets for maintenance, rehabilitation, and replacement to minimize costs and maximize value.
- **Stakeholder Engagement:** Liaising with technical teams, executives, and external stakeholders to align with organizational goals
- Provides direction and guides on Infrastructure and technical services related project programmes through effective planning, management, monitoring and evaluation of specific activities to ensure effective development and execution of programmes/projects.
- Ensure that all projects identified under DORA are efficiently and effectively implemented, while ensuring the existence and implementation of a robust operations and maintenance programme for existing municipal infrastructure.
- Responsible for the effective and efficient leadership and financial management of operations in the municipal engineering sector to ensure that the Integrated Development Plan and other infrastructure development plans, integrate congruently with the overall mandate of the municipality vis-à-vis service delivery and development facilitation.
- Manage effectively departmental cross cutting issues on a day to day basis and coordinate operational activities.

Projects Management:

- Quality

Adherence to standards, material quality and specification, competent staff, quality assurance processes.

- Time

Meeting deadlines, project completion efficiency, timely progress.

- Cost/Financial management

Efficient spending, responsible financial management, cost control.

- Safety

Focus on safety, regulatory compliance, incident rates.

- Management

Organisation, technical expertise, resource management, experience, responsiveness.

- Contractual/Admin

Change order/claims process, professionalism, responsiveness to owner staff.

- Manages cost, time, scope, and client communication
- Coordinates between design teams, consultants, and the construction side
- Ensures the project meets contractual and business objectives.

Buffalo Flats Potable water pipeline construction project

Construction of road layers

Upgrade of Dannhauser L M waste water treatment plant project

Construction of VIP Toilets Project in Dannhauser

Responsible for the water and waste water pump stations; reticulation and water and waste water treatment plants management of the implementation, monitoring, evaluation and reporting sequences of outcomes associated with plans and programs designed to accomplish key service delivery objectives with respect to the provision of quality water for consumption and the treatment of wastewater to avoid human and environmental hazards/ risks through the planning of work sequences and interventions, analysis of processes and operating condition and application of corrective measures and/ or alignment of procedures. To take responsibility for the implementation, execution, supervision and management of all engineering related municipal infrastructure projects; that is funded by MIG (municipal infrastructure grant) as well as internal funding. This is done in such a way that satisfying standard of work is achieved through allowed and practiced standards and specification using cost effective methods at reasonable time and within the allocated budget. Attend War Rooms meeting; Catchment Management Forums; Amajuba Technical Committee meeting.

PROJECT MANAGEMENT

Responsible for building municipal buildings; housing developments; roads construction; storm water drainage; water and sanitation projects

Responsible for monitoring and evaluation of projects and writing business plans

FUNCTIONAL MANAGEMENT

BLUE DROP AND GREEN DROP COMPLIANCE PREPERATION AND PRESENTATIONS

ATTENDING CONFERENCES

OPERATIONAL PLANNING AND REPORTING

Responsible to formulate and/or manage the evaluation and review of the Water Services Development Plan.

- Against critical deliverables as identified in the organisation's Integrated Development Plan.
- Analyse and evaluate the scoping, award and deliverable phases of projects associated with provision of water and sanitation services to communities.
- Provide water services policies and operational direction to WSA by interpreting policies, legislation and trends and guiding the WSA in implementing updated policies and procedures.
- Analyse supply and maintenance activities, information in terms of service supply and demands and other statistics and performing physical inspections in order to identify needs in terms of delivery, maintenance plans.

In order to ensure key service delivery priorities are identified and outcomes managed through continuous assessment, intervention and adjustment to operational plans.

PERSONNEL AND PERFORMANCE MANAGEMENT

Responsible to co-ordinate specific administrative and reporting requirements associated with the Key Performance and result Indicators.

- Oversee that staff is supplied with job descriptions, performance indicators.
- Oversee that the defining/ adjusting role boundaries, workflow processes and job design against laid down service delivery requirements.
- Determine staff levels and prepare motivations for the filling of vacancies to complement functional objectives and requirements.
- Participate in the recruitment and selection process, approving minimum design and specifications for inclusion into job advertisements and evaluating applicant's suitability through analysis of selected short-listed curriculum vitas and interviews if required to do so.
- Conduct appraisals to measure performance against agreed objectivities, counselling and consulting with personnel on developmental goals, career paths and, short term targets and standards.
- Monitor the adequacy of current training interventions through the evaluation competency demonstrated in workplace application and prepares assessment and progress reports for inclusion into the consolidated Skills Development Plan of the Department.
- Analyze statistical information pertaining to staff attendance, overtime, leave and addressing deviations or occurrences of abuse and/ or workplace conflict through the implementation of corrective measures in accordance with Human Resources Policies and Procedures.

In order to ensure a climate conducive to promoting and sustaining motivational and performance levels is cultivated and maintained enabling the Section to contribute positively to the Department's service level objectives and outcomes.

PROCEDURES, SYSTEMS AND CONTROLS

Oversee the implementation of procedures, systems and controls to regulate specific work sequences/ operations associated with the functionality, by:

- Communicating to personnel through the verbal and written mediums statutory and procedural requirements for adoption and compliance thereof.
- Evaluating and adjusting quality systems and controls regulating processes and operations associated with water purification and supply and wastewater treatment, drinking water quality and any water quality failures within the District.
- Inspecting work sites and/ or conducting observations of work sequences, operations and applications and, determining the extent of awareness and/ or the need for corrective/ remedial measures to address deviations from laid down standards.
- Discussing and/ or investigating workplace accidents/ incidents, seeking reasons from supervisory personnel on any non compliance/ deviation and providing direction on courses of action for execution.

In order to ensure sufficient awareness of policies and procedures prevails and unsafe conditions and/ or hazards are identified and rectified minimizing the threat of injury to persons, damage to property and/ or negative impact on the environment.

OPERATIONAL MANAGEMENT

PROCESS MONITORING

Oversee, co-ordinates and monitors sequences associated with the application, interpretation and adjustment of the operations associated with the purification and supply of water and, treatment of wastewater, by:

- Analysing demand and supply requirements with a view to aligning outputs to address critical needs and/ or interacting with service providers (uThukela Water, Eskom, Department of Water and Forestry) on requirements.
- Monitoring specific sampling and testing applications, perusing through test records and outcomes and/ or participating in the procedure used for determining the quality of water.
- Inspecting the operations of water treatment plant/ equipment and associated structures with a view to establishing the adequacy of specific applications related to the quality of water supply.
- Implementing and/ or approving specific process and application changes, taking into the current status and the desired outcome and monitoring the execution and results of corrective action guidelines.

In order to ensure the quality water to communities is made available for consumption and adequate measures are implemented to treat wastewater minimising/ alleviating health risks and/ or environmental hazards.

CONDITION MONITORING

Oversee, manages and maintains the operating condition and functionality of plant, equipment, vehicles and site, by:

- Evaluating status through perusal of inspection checklists, service records and registers with a view of identifying with risks and the availability and/ or implementation of alternative courses of action.
- Executing specific steps to initiate the upgrading of existing/ outdated plant and equipment through inspection and examination of the performance of existing units.
- Co-coordinating the implementation of planned and predictive maintenance sequences to address the operating functionality through replacement or service of movable/ immovable parts and components.
- Approving and executing specific actions to facilitate the removal, replacement and/ or repair of mechanisms, structures and/ or devices controlling flow/ feed sequences (flow-meters, pumps, valves, etc.).
- Effecting general cleaning programs to structures and operating equipment and/ or sites through the provision of schedules indicating time, resource, expected output levels and result indicators.

In order to ensure optimum performance and/ or uninterrupted functionality is maintained enabling the Section to achieve and sustain quality standards and output levels.

ADMINISTRATION

Oversee and ensure that specific administrative and reporting requirements associated with the key performance and result indicators of the functionality is coordinated, by:

- Preparing investigational and productivity reports referring to statistical data and qualitative information related to service delivery initiatives of the Section for the attention of the Director; Engineering Services for consideration and inclusion into Council and Sub Committee reports.
- Completing instructional/ operational documentation (vehicle log sheets) extracting information from field reports/ activity lists and forwarding for approval and processing.

- Compiling investigational reports and / or responses to correspondences and queries, undertaking research or extracting information and records to support content, recommendations and/ or opinion.
- Maintaining the activity and recordkeeping systems and/ or executing specific actions to facilitate the updating of registers and schedules (safety/ process monitoring).
- Develop operations and maintenance policies and by-laws through engaging uThukela Water, Councillors, Community and role players involved in order to ensure that water and wastewater services are delivered effective and efficiently according to Water Services Act and other relevant legislations.

In order to ensure administrative sequences dictating reporting requirements and approval procedures are complied with and correspondence responded to through the provision of accurate information on the activities of the Section.

STRATEGIC PLANNING

Develop divisional vision and strategy and ensure implementation by:

- Identifying customer (internal and external) needs by conducting surveys, through public debates or personal contact or Councillors requests.
- Provide input on operational units and generating aspects that should be included in the organizational strategic plan (IDP).
- Designing divisional vision with inputs from direct reports in order to ensure the implementation of the organizational strategy.
- Develop action plans in order to ensure achievement of divisional vision with inputs from direct reports.
- Communicating vision and strategy and progress on action plans to subordinates and customers by addressing people in person, sending e-mail or conducting meetings.
- Ensuring that monitoring systems exist to track progress on implementation of action plans in order to identify deviations and
- Compiling reports on divisional activities and progress in terms of action plans.
- Representing the division in local, district and public meetings and committees by providing inputs, communicating information between the organization and the relevant body to ensure participation and inputs in all forms.

In order to deliver effective and efficient control.

CLIENT SERVICES

Responsible to oversee the client service functions, by

- Representing the division on committees forums and giving feedback to and from these meetings to appropriate staff either internally (ADM) or externally (uThukela Water).

In order to ensure continuously service delivery.

POSITION: ASSISTANT DIRECTOR

DURATION: 1 JANUARY 2009 TO 30 NOVEMBER 2009.

EMPLOYER: UTHUNGULU DISTRICT MUNICIPALITY

Distribution services:

Key performance areas:

- Strategic Leadership: assist Director to strategically align distribution department to ensure effective leadership and development.
- Transversal management: Actively manage service delivery and operations that require multiple branches while driving the water strategy transversal programme for upgrading water and sanitation in rural and urban areas and improving management of water and sewer networks.
- Business and infrastructure planning, implementation and maintenance: Assist Director to oversee the department and implementation of the distribution services business plan and master plan for 10 year planning horizon.
- Legislative compliance: Ensure provision of water and sewer reticulation services to comply with relevant national Acts, regulation guidelines and best practices.
- Organisational alignment: Ensure that services delivery to rural and urban areas are aligned to organisational objective and required standards.

Project Management: (2009)

Spring Protection Projects

Siting boreholes; Drilling boreholes; Testing water quality and sustainable yield of borehole water and construction of reticulation pipelines including rising main pipes at Sibululwane; Hlawini; Holinyoka; Ncemane; Qomintaba; Ehlanzeni; Engome; Manzamnyama; Empumelelweni; Macekane and Maduma Areas projects

Duties include

♦**Managing Customer Focused Service Delivery:** Monitoring the efficiency of water services operations: pump stations; sewer reticulation; water reticulation; water treatment and waste water treatment ; Assessing and evaluating the capacity and capability of internal resources and/ or co-coordinating such resources, scheduling activities to address demand and maintain services; Providing support to consultants with the formulation and preparation of Business Plans and establishment of Committees; Motivating for the approval of Business Plans; Conducting site inspections; Attending site meetings and providing information on performance assessments; Evaluating contractor performance on infrastructure and networks projects, auditing payment certificates.

♦**Relationship Management and Communications:** Participating in various working groups and forums; Attending community hearings and discussions

♦Providing reasons/ explanations and alternative solutions to remedy or address deviations; Attending to specific queries and making available investigational and progress reports; Engaging with communities, leadership structures and/ or key stakeholders;

♦**Operational Control:** Co-ordination and controls of tasks/ activities associated with personnel performance

♦Establishing the adequacy and availability of personnel against agreed outcomes; Addressing workplace conflict/ conduct; Defining skills gaps and training needs.

♦**Administration:** Preparing interim and final project investigation reports; Completing instructional/ operational documentation (vehicle log sheets; overtime schedules; travel claims), Compiling responses to correspondences and queries

♦Preparing estimates and motivating for specific provisions for inclusion into the Departmental budget. Attend War Rooms meeting; Catchment Management Forums; UThungulu Technical Committee meeting.

POSITION: CO ORDINATOR

DURATION: 1 APRIL 2007 TO 30 DECEMBER 2008

EMPLOYER: ETHEKWINI MUNICIPALITY

Project Management :(2007)

Inwabi and Ingonyameni upgrade of 50 mm dia pipe to 100 mm dia pipes
Installing air valves and servicing scour valves at Inwabi to Ingonyameni area.

Installing air valves, Line valves and servicing scour valves at Kwa Ximba area.
Doing water balance/water consumption at Mbumbulu; Nyuswa and Inwabi to Ingonyameni areas

Measuring downstream and upstream pressures at Mbumbulu; Nyuswa and Inwabi to Ingonyameni

Technical Duties (Operations)

- Assists the Manager with ensures that the operation protocol is applied to all staff of the region.
- Assists with enforcing and initiate disciplining of staff.
- Allocate work to depot staff and ensure that staff works efficiently.
- Assist with evaluation of proposed new developments and assess impact on water supply system.
- Assist with the evaluation of problems in water supply by installing recording equipments as requested by the Manager.
- Investigate the cause of operational problems with bulk supply and implement remedial measures to rectify it.
- Attend to daily correspondence from consumers, consultants, developers, etc regarding water service in a region.
- Investigate Complaints regarding outstanding pavement and road reinstatement issues and settle claims by liaising with metro's insurance.
- Day to day staff supervision and sites inspections.

Attend War Rooms meeting; Catchment Management Forums; EThekweni Technical Committee meeting.

Staff Management

- Ensures that operational protocol is applied to all staff of the region.
- Enforce and initiate disciplining of staff.
- Allocate work to depot staff and ensure that staff works efficiently.
- Authorise leave, sick leave, overtime and standby forms as submitted by subordinate staff.
- Investigates alleged irregularities of miss use of official plant and vehicles for disciplinary purposes.
- Ensures that audits checks on staff attendance and impressed stock of material in field vehicles is carried out regularly

Main purpose of position

To co ordinate and monitor all aspects related to operation and maintenance of water supply components, namely, reticulation pipes and trunk mains.

Key results Area / Responsibilities

Maintenance of EBUs and Water Dispensers

Supervising Contractors and Plumbers who are repairing reticulation pipes

All planning associated with the management of the Maintenance of EBUs and Water Dispensers

POSITION: CHIEF MAINTENANCE TECHNICIAN

DURATION: 1 SEPTEMBER 2005 TO 30 MARCH 2007

EMPLOYER: Sisonke District Municipality

Project Management (2005 to 2006)

Supervising the assessment of Greater Kokstad Municipality Water supply and installation of PRV and associated pipes (six chambers)
